Style #	Frame Color	Lens Color	Lens Shape
75000	Black	Dark Gray	Rectangular
75001	Bronze	Brown Gradient	Tapered

*The Prato Eyewear line is an ideal choice for events. All of our sunglasses are lightweight, flexible, and come equipped with adjustable nose pads. This allows us to fit a wide range of head sizes and face shapes. Here are some additional points:*

- ◆ All lenses are made from optical grade, impact resistant resins and block 100% of harmful ultraviolet light. The lenses are also horizontally decentered to minimize the distortion normally associated with wrapped styles.
- ◆ The nose pads and temple tips of all styles are made from a no-slip material that prevents the sunglasses from moving, even in the harshest environments.
- ◆ The Convertible, Noosa and Paros style frames are made of Xylex, a new resin from GE Plastics. This material provides the optimal combination of strength and flexibility. It also possesses superb memory which allows the frame to maintain its original shape even after extended wear.
- ◆ The Edge Sport and Wide Open Sport frames are made from an aluminum-magnesium composite. The coalescing of these materials creates a frame that is light weight and durable, a rare combination for metal framed eyewear. Both styles are also equipped with spring hinges that provide a comfortable, flexible fit.
